                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (C) (see AAW344006 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement C2 pathway proteins (by superactivation until one or more components are C3 cantusted), specifically to prevent rejection of foreign material C3 convested), specifically to prevent complement-mediated C4 diseases resulting from (surgical) injury or antibody-antigen interaction C5 in autoimmune disease, also to localise and/or amplify endogenous C4 complement protein conversion and deposition at a specific site (e.g. a C4 virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application. Also C5 complement of a cancer cells left after surgical removal of a tumour). Also C6 contemplated is ex vivo treatment, especially by passing blood through a C6 contemplated is ex vivo treatment, especially by passing blood through a C6 contemplated is ex vivo treatment, especially by passing blood through a C6 contemplated by factor y mediators or killing of leukaemia cells or C6 contemplated factor y mediators or killing of leukaemia cells or C7 inhibited by factor I, it can bind repeatedly to factor B (which is then cancivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

CC forms a down-regulation resistant C3 convertage. (A), their variants, CC fragments and conjugates are used to deplete levels of complement cpathway proteins (by superactivation until one or more components are cexhausted), specifically to prevent rejection of foreign material comparticularly a xenograft) but also to prevent complement-mediated complement grow (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a complement protein conversion and deposition at a specific site (e.g. a complement growed cell or tumour, to increase sensitivity to complement rediated responses; a particular application is eliminating contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated by factor in (this may remove additional anabylactic peptides consumption of factor i, it can bind repeatedly to factor B, which is then can be consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 6; Page -; 123pp; English.

This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC diseases resulting from (surgical) injury or antibody-antigen interaction CC in autoimmune disease, also to localise and/or amplify endogenous CC virus, infected cell or tumour, to increase sensitivity to complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application; Also CC contemplated is ex vivo treatment, especially by passing blood through a CC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC inhibited by factor I, it can bind repeatedly to factor B (which is then consumption of factor B.

                                                                                                                                 This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign matterial CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a complement protein conversion and deposition at a specific site (e.g. a complement rediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a cC contemplated is ex vivo treatment, especially by passing blood through a cC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC inhibited by factor I, it can bind repeatedly to factor B (which is then considered), causing inactivation of the alternative pathway by considered considered in activation of factor B (which is then considered considered in activation of the alternative pathway by

                                                                                                                                                                               CC specifically to prevent rejection of foreign material (particularly a compound of foreign material) (particularly a compound of foreign material) (particularly a composition of foreign material) (particularly a composition in autoimmune composition) of composition in autoimmune composition and deposition at a specific site (e.g. a virus, infected cell conversion and deposition at a specific site (e.g. a virus, infected cell conversion and deposition at a specific site (e.g. a virus, infected cell conversion and deposition at a specific site (e.g. a virus, infected cell conversion and deposition at a specific site e.g. a virus, infected cell conversion and deposition at a specific site e.g. a virus, infected cell conversion and the sensitivity to complement-mediated responses; a conversion and application is eliminating any cancer cells left after conversion and the sensitivity of surgical removal of a tumour). Also contemplated is ex vivo treatment, conserved additional anaphylactic peptides and other inflammatory conserved by passing blood through a matrix containing (A) (this may conserved bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing conserved the alternative pathway by consumption of factor B.
                                                                         Query Match

                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the wild type human C3 protein. This protein can be mutated to produce a protein of the invention. The protein of the invention is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     pathway by super-activation, especially for preventing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         resistant

This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a tumour). Also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-NOV-1996;

                                         This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC inhibited by factor I, it can bind repeatedly to factor B (which is then considered in activated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-JUN-1996;

ID AAW3
This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, cf fragments and conjugates are used to deplete levels of complement cC pathway proteins (by superactivation until one or more components are certaints, psecifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous cc virus, infected cell or tumour, to increase sensitivity to complement protein conversion and deposition at a specific site (e.g. a crimus, infected cell or tumour, to increase sensitivity to complement mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is ex vivo treatment, especially by passing blood through a contemplated is extracted bone marrow. Since (A) is not
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating
                                                                                                                                                                                                                                                                                                                                                                                                                               19-NOV-1996;

Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                   Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  down-regulation resistant C3 convertase; xenograft rejection; therapy; complement-mediated disease; autoimmune disease; leukaemia cell; tumour; complement-mediated response; MHC-mismatched lymphocyte; mutein.

Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), caussing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition at a specific site (e.g. a view of the conversion and deposition and deposition at a specific site (e.g. a view of the conversion and deposition and deposition and deposition and deposition and deposition at a specific site (e.g. a view of the conversion and deposition and d

This protein is a protein of the C2 invention, and is a modified native complement pathway protein (A) that C3 convertase. (A), their variants, C4 fragments adomn-regulation resistant C3 convertase. (A), their variants, C5 fragments and conjugates are used to deplete levels of complement C5 pathway proteins (by superactivation until one or more components are C6 exhausted), specifically to prevent rejection of foreign material C7 (particularly a xenograft) but also to prevent complement-mediated C8 in autoimmune disease, also to localise and/or amplify endogenous C7 (particular protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating C6 any cancer cells left after surgical removal of a tumour). Also C7 complement-mediated responses; a particular application is eliminating C7 and other inflammatory mediators) or killing of leukaemia cells or C7 matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or C7 inhibited by factor I, it can bind repeatedly to factor B (which is then consumption of factor B.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC This sequence represents a mutated human C3 protein of the invention CC (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC fragments and conjugates are used to deplete levels of complement CC pathway proteins (by superactivation until one or more components are calcularly a xenograft) but also to prevent complement-mediated CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC contended is ex vivo treatment, especially by passing blood through a CC contended is ex vivo treatment, especially by passing blood through a CC matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or inactivated by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Loc

                                                                                                                               This sequence represents a mutated human C3 protein of the invention CC (see AAM34606 for wild type protein). This protein is a protein of the convention, and is a modified native complement pathway protein (A) that CC invention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A) their variants, CC fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are cathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC (particularly a xenograft) but also to prevent complement-mediated CC (complement protein conversion and deposition at a specific site (e.g. a CC complement protein conversion and deposition at a specific site (e.g. a CC complement protein conversion and deposition at a specific site (e.g. a CC complement calls left after surgical removal of a tumour). Also CC consequence calls left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or CC consequence and contemplated is extended to extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then constituted), causing inactivation of the alternative pathway by

                     virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any cancer cells left after surgical removal of a rumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by
                                                                                                                                                                                                                                                                                                                          fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Farries TC,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Misc-difference

This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, cf fragments and conjugates are used to deplete levels of complement proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement—mediated (diseases resulting from (surgical) injury or antibody-antigen interaction c1 in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating c2 contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or other inflammatory mediators) or killing of leukaemia cells or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

            This sequence represents a mutated human C3 protein of the invention (see AW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) that forms a down-regulation resistant C3 convertase. (A), their variants, fragments and conjugates are used to deplete levels of complement pathway proteins (by superactivation until one or more components are exhausted), specifically to prevent rejection of foreign material (particularly a xenograft) but also to prevent complement-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      complement-mediated complement-mediated
                                                                                                                            Claim 18; Page -; 123pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating any canneer cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a matrix containing (A) (this may remove additional anaphylactic peptides and other inflammatory mediators) or killing of leukaemia cells or MHC-mismatched lymphocytes in extracted bone marrow. Since (A) is not inhibited by factor I, it can bind repeatedly to factor B (which is then inactivated), causing inactivation of the alternative pathway by consumption of factor B.
                                                                                                                                                                                          Modified complement pathway protein that forms C3 convertase resistant to down-regulation - used to exhaust the complement pathway by super-activation, especially for preventing graft rejection, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; C3 protein; convertase; complement pathway protein; infection; down-regulation resistant C3 convertase; xenograft rejection; therapy; complement-mediated disease; autoimmune disease; leukaemia cell; tumour;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
```

This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the invention, and is a modified native complement pathway protein (A) the invention, and is a modified native complement pathway protein (A) the invention of the invention of

123pp;

English

a down-regulation resistant C3 convertase.

(A) their variants, CC fragments and conjugates are used to deplete levels of complement CC parthway proteins (by superactivation until one or more components are CC exhausted), specifically to prevent rejection of foreign material CC (particularly a xenograft) but also to prevent complement-mediated CC diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous CC complement protein conversion and deposition at a specific site (e.g. a CC virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application is eliminating CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is ex vivo treatment, especially by passing blood through a CC contemplated is extracted bone marrow. Since (A) is not continuated by factor I, it can bind repeatedly to factor B (which is then consumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

CC This sequence represents a mutated human C3 protein of the invention (see AAW34606 for wild type protein). This protein is a protein of the cinvention, and is a modified native complement pathway protein (A) that CC forms a down-regulation resistant C3 convertase. (A), their variants, CC pathway proteins (by superactivation until one or more components are can pathway proteins (by superactivation until one or more components are can pathway proteins (by superactivation until one or more components are comparated and comparated protein protein protein protein conversion and deposition of foreign material c3 diseases resulting from (surgical) injury or antibody-antigen interaction in autoimmune disease, also to localise and/or amplify endogenous complement protein conversion and deposition at a specific site (e.g. a virus, infected cell or tumour, to increase sensitivity to complement-mediated responses; a particular application; Also complement cells left after surgical removal of a tumour). Also contemplated is ex vivo treatment, especially by passing blood through a can can certification of the analyticatic peptides cand other inflammatory mediators) or killing of leukaemia cells or c4 inhibited by factor I, it can bind repeatedly to factor B (which is then can sumption of factor B.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ

The fragment was isolated from samples from affected individuals using SELDI (surface enhanced laser desorption ionisation) and a protein chip. The marker is useful in methods for diagnosing a disease state such as myocardial infarction, intracerebral hemorrhage or congestive heart failure. The methods used include mass spectroscopy or immunoassays, e.g. radioimmunoassay, enzyme-linked immunosorbent assay (ELISA) or fluorescent immunoassays. The invention enables a diagnostician to characterise the presence or absence of the disease state relative to recognition of the presence or absence of the biopolymer, respectively. The presence is the human complement C3f derived peptide of the biopolymer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Biopolymer marker, useful in diagnosing disease states including myocardial infarction and intracerebral hemorrhage, comprises compliment C3f fragment with a specified molecular weight -
                           New biopolymer markers useful for indicating one particular disease state such as myocardial infarction, congestive heart failure and intracerebral hemorrhage
                                                                                                                                                                                                                                                                                                                                                                                                            Human; biopolymer marker;
congestive heart failure;

The biopolymer marker is useful for indicating one particular disease state biopolymer marker is useful for indicating one particular disease state such as syndrome X, myocardial infarction, congestive heart failure and intracerebral haemorrhage. The marker is released into the circulation where it may be present in the blood or any blood product. The presence of each marker is determined using antibodies specific for each of the markers and detecting specific binding of each antibody to its respective marker. The present sequence represents a biopolymer marker which is characterised as a human C3f fragment from the complement
                                                                 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventice useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB0737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic a genes from Drosophila interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2001-656860/75.
